1. The graphs show how the motion of four objects change with time. The statements describe different motions.

Draw a line or lines from each graph to the description of the motion represented by that graph.

Motion graphs

Distance

No movement

## Distance

Time (s)

Speed
Speed

Time (s)
2. A cyclist waits at a set of traffic lights. The graph shows how her velocity changes after the lights turn green, over a period of time.

2 (a) Calculate the acceleration during the first part of the journey from 0 to 10 seconds. Clearly show your working
$20 \div 10 \quad$ or $\quad(20-0) \div 10$ or $(20-10) \div(10-0)[1$ mark]

$$
\begin{array}{r}
\text { Acceleration }=\ldots \ldots .2 \ldots \ldots . . \mathrm{m} / \mathrm{s} / \mathrm{s}[1 \text { mark] } \\
(2 \text { marks })
\end{array}
$$

2 (b) Calculate the distance travelled for the part of the journey labelled B. Ensure you write the correct units. Clearly show your working

Area of shaded region $=5 \times 20$ [1 mark]
Answer = 100 [1 mark]
units $=m$ or metres [1 mark]

Distance travelled $=$ $\qquad$ 100 m $\qquad$

2 (c) Compare the motion of the cyclist for part C of the journey with part A .
cyclist is slowing down/decelerating/getting slower [1 mark]
at a faster rate/slowing down faster/more quickly [1 mark]
‘slowing down faster/more quickly' gets 2 marks
3. A toy car makes a short journey. The graph shows how the distance travelled changes with time.

(3) (a) At which point on the graph was the car moving at the fastest speed? 8 to 10 seconds [1 mark] give mark if labelled correctly on the graph
(3) (b) How long did the car stop for?

3 seconds
(3) (c) Calculate the speed of the car for the part of the journey from 8 to 10 seconds.

$$
\begin{aligned}
& 4 \div 2 \text { or }(9-5) \div(10-8)[1 \text { mark] } \\
& 2[2 \text { marks] }
\end{aligned}
$$

Speed $=$ $\qquad$ $\mathrm{m} / \mathrm{s}$
